## DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

### CERTIFICATE

This is to certify that the Project work entitled “**Portfolio Website**” is carried out by the **Chitransh Phalkey** in partial fulfilment for the award of the degree of **Bachelor of Technology in Computer Science and Engineering**, Symbiosis International (Deemed University), Pune during the academic year 2025-2026.

Dr. Harshala Shingne Mam  
Assistant Professor  
Hack\_O\_week Mentor

Dr. Gaurav Londhe  
Associate Professor  
Hack-O-Week In-Charge

Dr. Sagar Kumar Badhiye  
HoD, Dept. of CSE,  
SIT Nagpur

Dr. Bhupesh Kumar Dewangan  
Associate Professor,  
IPR Co-ordinator

**SYMBIOSIS INSTITUTE OF TECHNOLOGY, NAGPUR**

**Symbiosis International (Deemed University)**

(Established under section 3 of the UGC Act, 1956)

Re-accredited by NAAC with 'A++' Grade | Awarded Category - I by UGC

Founder: Prof. Dr. S. B. Mujumdar, M. Sc., Ph. D. (Awarded Padma Bhushan and Padma Shri by President of India)

---

## **DECLARATION**

I hereby declare that the project titled “**PORTFOLIO WESBIT**” submitted to Symbiosis Institute of Technology, Constituent of Symbiosis International (Deemed University) Pune for the award of the degree of Bachelor of Technology in Computer Science and Engineering is a result of original research carried out by me. I understand that my report may be made electronically available to the public. It is further declared that the project report or any part thereof has not been previously submitted to any University or Institute for the award of any degree or diploma.

Name of Student: Chitransh Phalkey

PRN: 25070521183

Degree: Bachelor of Technology in CSE

Department: Computer Science and Engineering

Title of the project : PORTFOLIO WESBITE

---

(Signatures of the Student)

Date: 1-4-26

## ABSTRACT

In today's digital era, having a strong online presence is essential for individuals to showcase their skills and achievements. This project presents the design and development of a Personal Portfolio Website.

The main objective of this project is to provide a simple, responsive, and visually appealing platform where users can present their projects, skills, and personal information effectively. The system allows users to navigate through different sections such as About, Skills, Projects, and Contact in an organized manner.

The project is developed using frontend technologies such as HTML, CSS, and JavaScript. It focuses on key aspects like user interface design, responsiveness, and interactivity. The system works completely on the client side and demonstrates how basic web technologies can be used to build professional portfolio websites.

Overall, this project highlights the importance of personal branding and provides a foundation for further development into a complete full-stack portfolio system.

### Keywords:

Web Development, Portfolio Website, Responsive Design, User Interface, JavaScript, Personal Branding, Frontend Development, UI/UX.

## CHAPTER 1: BACKGROUND AND TECHNICAL OVERVIEW

In the modern digital era, having an online presence has become very important for students, professionals, and developers. A portfolio website acts as a digital identity where individuals can showcase their skills, achievements, and projects in a structured and professional manner.

Traditional methods such as resumes and CVs are limited because they are static and do not provide an interactive experience. A portfolio website overcomes these limitations by providing dynamic content, better presentation, and easy accessibility from anywhere.

This project focuses on developing a Personal Portfolio Website that allows users to display their profile, technical skills, projects, and contact details in a well-organized format. The website is designed to be simple, responsive, and user-friendly.

The system is developed using frontend technologies such as HTML, CSS, and JavaScript. HTML is used for structuring the content, CSS is used for styling and layout design, and JavaScript is used to add interactivity and dynamic behavior.

The entire system works on the client side, which ensures fast performance and smooth user experience. This project demonstrates how basic web technologies can be used effectively to build real-world applications.

---

## CHAPTER 2: PROBLEM STATEMENT AND MOTIVATION

### Problem Statement:

In today's competitive environment, students need an effective way to showcase their skills and projects. However, most students rely only on traditional resumes, which are static and do not highlight their work in an interactive manner.

There is a lack of a centralized platform where students can present their achievements, technical skills, and projects dynamically. This creates difficulty for recruiters to properly evaluate the candidate's capabilities.

### Motivation:

The motivation behind this project is to create a modern solution that allows individuals to present themselves professionally through a portfolio website.

The project aims to:

- Improve personal branding
- Provide better visibility of projects and skills
- Enhance chances of internships and job opportunities

Another motivation is to gain practical knowledge of frontend development and understand how real-world web applications are built.

---

## CHAPTER 3: NOVELTY AND INNOVATIVE CONTRIBUTIONS

This project includes several features that make it more advanced than a basic static website.

The website provides smooth navigation between different sections such as About, Skills, Projects, and Contact. This improves user experience and makes the website easy to explore.

A responsive design is implemented so that the website works properly on different devices such as mobile phones, tablets, and desktops.

The project section highlights different works and projects in an organized way, making it easy for recruiters to understand the candidate's capabilities.

Modern UI design techniques such as clean layouts, proper spacing, and simple animations are used to enhance the overall appearance of the website.

These features make the project more interactive, visually appealing, and user-friendly.

---

## CHAPTER 4: TECHNICAL ADVANTAGES AND PRACTICAL USEFULNESS

This project offers several technical advantages:

- It provides a professional platform for individuals to showcase their skills and projects
- It improves chances of getting internships and job opportunities
- The responsive design ensures compatibility across different devices
- Fast performance due to client-side execution
- Easy to maintain and update

From a practical perspective, this project is useful for students, developers, and professionals who want to build their online presence.

It can also be used as a base for developing more advanced applications such as full-stack portfolio systems.

---

## CHAPTER 5: DETAILED METHODOLOGY / SYSTEM ARCHITECTURE

The development of this project follows a structured approach.

First, the basic structure of the website is created using HTML. It includes sections like:

- Header
- About Section
- Skills Section
- Projects Section

- Contact Section

Next, CSS is used to design the layout and improve the visual appearance of the website. It includes:

- Color schemes
- Typography
- Spacing and alignment
- Responsive design using media queries

Finally, JavaScript is used to add interactivity such as:

- Smooth scrolling
- Navigation effects
- Dynamic content updates

The system works by displaying structured information and responding to user interactions without reloading the page.

---

## CHAPTER 6: PRIOR ART AND RELATED WORK

Before developing this project, various existing portfolio websites were studied to understand modern web design trends and user interface patterns.

Popular portfolio layouts were analyzed to learn:

- Section-based design
- Navigation structure
- Color combinations
- User interaction patterns

This study helped in improving the overall design, usability, and performance of the project.

It also provided insights into how professional portfolio websites are structured and presented.

---

## CHAPTER 7: APPLICATIONS AND DEPLOYMENT AREAS

This project can be used in multiple areas:

- Personal branding for students and professionals
- Internship and job applications

- Showcasing technical skills and projects
- Building an online professional identity

It can also be used as:

- A prototype for full-stack applications
- A learning project for beginners
- A base for freelance or client projects

The website can be deployed on platforms like GitHub Pages, Netlify, or Vercel for public access.

---

## CHAPTER 8: CONCLUSION AND FUTURE SCOPE

This project successfully demonstrates how a responsive and user-friendly portfolio website can be developed using frontend technologies.

It highlights the importance of UI/UX design, responsiveness, and structured content in web development.

Through this project, various concepts such as HTML structure, CSS styling, responsive design, and JavaScript interactivity were learned and implemented.

Future Scope:

- Backend integration using Node.js or Django
- Database integration for storing user data
- Contact form with email functionality
- User authentication (Login/Signup)
- Blog section for sharing knowledge
- Conversion into a full-stack web application
- Mobile application development
- Integration with cloud services

## APPENDICES

### Appendix A: Screenshots of the Website Interface

This section includes screenshots of the developed Portfolio Website. It shows different parts of the interface such as the homepage, About section, Skills section, Projects section, and Contact section. These screenshots help in understanding the visual design and layout of the project.

---

### Appendix B: System Workflow Description

This section describes the overall working flow of the system. It explains how the user interacts with the website:

- User opens the portfolio website
- Navigates through different sections (About, Skills, Projects)
- Views project details
- Uses contact section to connect

The system dynamically responds to user interaction without reloading the page.

---

### Appendix C: Features Summary

This section summarizes the main features of the project:

- Responsive design (mobile + desktop)
- Section-based navigation
- Project showcase
- Clean and modern UI
- Smooth scrolling and basic animations

---

## Appendix D: Limitations of the System

This section highlights the limitations of the project:

- No backend integration
  - No database connectivity
  - No authentication system (login/signup)
  - Limited to frontend functionality only
- 

## Appendix E: Future Enhancements

This section includes possible improvements:

- Backend integration using Node.js
- Database support (MongoDB / MySQL)
- Contact form with email functionality
- User authentication system
- Blog section
- Deployment with custom domain
